Introduction

Introduction: Where should EVs belong in Seattle?

Background: Electric Vehicles are a key component to reducing transportation emissions and meeting climate goals. To support the continuous adaptation of these vehicles, charging infrastructure needs to strategically grow.

Target Audience:

- City planners
- EV Charging

Our application:

- Maps current chargers in Seattle
- Enables custom criteria filtering
- Maps predicted chargers

Previous Work:

Use Cases & Demo

Use Cases

Use Cases

Exploring EV charging station placement across Seattle

Evaluate quality of placement of current stations

Predicting optimal locations of charging stations

Core Question

Where are the EV charging stations in Seattle, and how does EV infrastructure address existing traffic?

How effective are the placements of EV chargers based on traffic, population, and EV registration factors?

Based on the gathered data, which areas in Seattle would be optimal for EV chargers to be placed?

Web Design Components

- **ZIP Code Search (Input)**
- **Road-Level Detail Map**
- **Statistics Table for selected ZIP**

- **Scoring Weights (Input)**
- **Overview Map**
- **Statistics table**

- **Maps**
- **Input data**

Use Case - Exploring EV charging station placement across Seattle

1. ZIP Code Search

Enter ZIP code

983|

98133

98134

98136

98103

- Searchable dropdown with autofill
- 29 Seattle ZIPs

Use Case - Exploring EV charging station placement across Seattle

2. Overview Map

- each zip- code area is colored by average daily traffic flow
- green dots showing all existing EV charging station locations
- Supports click-to-select directly on the map

Use Case - Exploring EV charging station placement across Seattle

3. Road-Level Detail Map

4. Statistics Table for selected ZIP

Population

50,500

Stations

8

Level2 Spots ?

14

DC Fast Spots ?

6

Avg Daily Flow ?

3,774

Stations in ZIP 98118

	Station	Level2	DC Fast	Network
0	Rose II Apartments	6	0	EVGATEWAY
1	Willow Crossing	2	0	Blink Network
2	SHA - New Holly - Public	2	0	OpConnect
3	CITY OF SEATAC CITY HALL 5	2	0	ChargePoint Netwo
4	CITY LIGHT COLUMBIA CITY 1	1	0	ChargePoint Netwo

Demo - Exploring EV charging station placement across Seattle

Use Case - Evaluating quality of placement for current stations

1. Scoring Weights (Input)

Demo - Evaluating quality of placement for current stations

Use Case - EV Placement Recommendation

Logistic Regression

- Model split Seattle map into grid of ~ 1,000 squares
- Output: 1 = EV station in square, 0 = no ev station
- Accuracy of prediction: 0.73
- Relevant predictor features: underground power lines, distance to major roads

```
--- Logistic Regression ---  
Accuracy: 0.73  
Precision: 0.29  
Recall: 0.57  
F1 Score: 0.38
```

EV Station Prediction Results

Predicted Probability of Station Location
(Logistic Regression)

Existing (green) vs Recommended (red) Station Locations

Demo - EV Placement Recommendation

REFLECTION

Lessons Learned

Software

- Using GitHub
 - Writing TOML files, YAML files.
 - Dealing with pull requests

Design Elements

- Component interactions are important to identify early in the project
- Clarifies dependencies
 - guides team collaboration

Future Work

1. Evaluation Scope

2. Geographic Scope

Thank you!
